The *National Listing of Medicare Providers Furnishing Kidney Dialysis and Transplant Services* provides renal beneficiaries with a list of Medicare-approved providers who furnish kidney dialysis and transplant services. By including information on both the location of the providers and on the range of renal services available at those providers, this publication allows beneficiaries and those responsible for their care an improved opportunity to make treatment decisions and referrals.

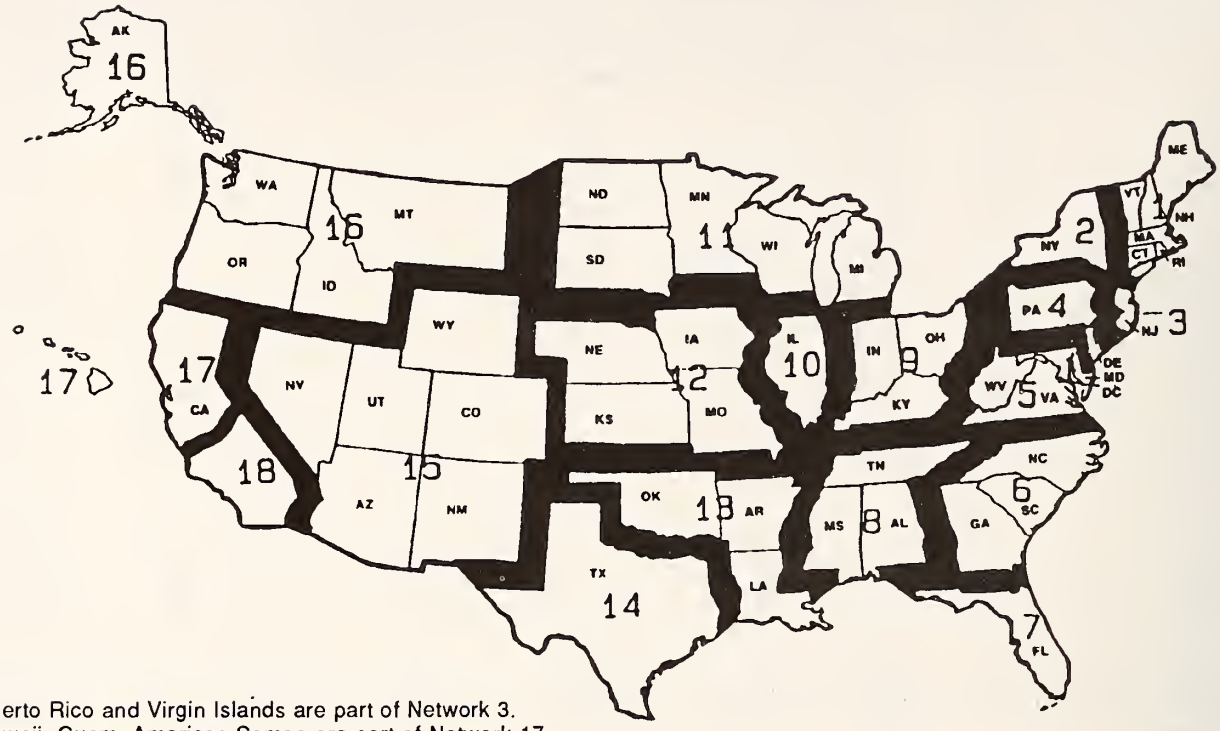
## ESRD Network Boundaries effective January 1, 1988



Puerto Rico and Virgin Islands are part of Network 3.
Hawaii, Guam, American Samoa are part of Network 17.

# Glossary of Terms

The items appearing in this glossary are intended to assist the reader by supplying operational definitions of the terms used in this publication.

*Continuous Ambulatory Peritoneal Dialysis (CAPD)* - CAPD is a continuous dialysis process using the patient's peritoneal membrane as a dialyzer. The patient connects a 2-liter plastic bag of dialysate to a surgically implanted indwelling catheter and allows the dialysate to pour into his peritoneal cavity. Four to six hours later the patient drains the fluid out into the same bag, and replaces the old bag with a new bag of fresh dialysate. This is done three to five times a day.

*Continuous Cycling Peritoneal Dialysis (CCPD)* - CCPD is a treatment modality which combines the advantages of the long dwell, continuous steady state dialysis of CAPD, with the advantages of automation inherent in intermittent peritoneal dialysis. The major difference between CCPD and CAPD is that the solution exchanges which are performed manually during the day by the patient on CAPD are moved to the nighttime with CCPD and are performed automatically with a peritoneal dialysis cycler. The long nighttime dwell of CAPD is moved to the daytime with CCPD.

*Dialysis Center* - A hospital unit which is approved to furnish the full spectrum of diagnostic, therapeutic, and rehabilitative services required for the care of ESRD dialysis patients (including inpatient dialysis furnished directly or under arrangement).

*Dialysis Facility* - A unit of a hospital which is approved to furnish dialysis service(s) directly to ESRD patients.

*Hemodialysis (HEMO)* - A method of dialysis in which blood from a patient's body is circulated through an external device or machine and then returned to the patient's bloodstream. Such an artificial kidney machine usually is designed to remove fluids and metabolic end products from the bloodstream by placing the blood in contact with a semi-permeable membrane which is bathed on the other side by an appropriate chemical solution referred to as dialysate.

*Inpatient Dialysis Only* - A renal dialysis center which performs 20 percent or less of their dialysis on an outpatient basis.

*ESRD Network/Renal Network* - All Medicare- approved ESRD facilities in a designated geographic area which collectively furnish the necessary care for ESRD patients.

*Peritoneal Dialysis (PERI)* - A procedure which introduces dialysate into the abdominal cavity to remove waste products through the peritoneum (the membrane which surrounds the intestines and other organs in the abdominal cavity). It functions in a manner similar to that of the semi-permeable membrane in the hemodialysis machine.

*Provider Number* - An assigned Medicare number for billing and/or identification purposes which consists of six positions. The first two positions represent a State code. The third and fourth positions represent the type of provider of services. The fifth and sixth positions are sequentially assigned.

*Self-Care Services* - A unit of a dialysis facility or center where patients dialyze who have been trained to perform self-dialysis with little or no professional assistance.

*Staff-Assisted Services* - A dialysis setting in which the patient is dialyzed at a facility or center by staff at that facility or center.

*Station* - The treatment area which is designed and equipped to provide adequate and safe dialysis therapy, as well as privacy and comfort for patients.

*Training Services* - A program that trains ESRD patients to perform self-dialysis at a self-care unit or at home with little or no professional assistance, and trains other individuals to assist patients in performing self-dialysis.

*Transplant Center* - A hospital unit which is approved to furnish direct transplantation and other medical and surgical speciality services for the care of the ESRD transplant patients, including inpatient dialysis furnished directly or under arrangement.
